Uniform baking

The AIR.Plus technology ensures perfect uniformity within every single pan, on all trays, from the top one to the bottom one.

AIR.PLUS

UNIFORM BAKING WITHOUT COMPROMISE

Air is the medium for the heat transmission and thereafter the means to bake products. The performance of air flow is fundamental to obtain uniformity of baking in all the points of the single tray and in all the trays. For this reason the air flow inside the chamber plays a leading role in the design of all SPIDOCOOK CALDOBAKE ovens.

The AIR.Plus technology has been designed by SPIDOCOOK to obtain perfect distribution of the air and heat inside the baking chamber. At the end of the baking, thanks to the AIR.Plus technology, foods have a uniform external color and their consistency will remain intact for several hours.

DRY.PLUS

TEXTURE AND SHAPE CRUNCHY OUTSIDE, SOFT INSIDE

The presence of humidity during the last phases of the baking of leavened products can compromise the achievement of the desired result. DRY.Plus technology allows the rapid extraction of the humidity from the baking chamber released by the food.

DRY.Plus technology ensures the texture of the baked products, allowing to obtain a dry and well structured internal structure and a crisp and crumbly external surface.
